

SkillCraft Technology Internship

Task 02: Prompting for Creativity

Prepared by: Shaik Suheal

Introduction

Prompting for Creativity focuses on designing prompts that encourage AI systems to generate innovative, detailed, and imaginative outputs. By adding context, roles, and objectives, users can significantly improve the quality of AI-generated content.

Example 1

Basic Prompt: Generate a startup idea for students.

AI Output: Create an app that helps students learn online.

Enhanced Prompt: Act as a successful entrepreneur. Generate an innovative startup idea for MCA students in India. Include problem, solution, target audience, revenue model, and growth opportunities.

Enhanced AI Output: CareerPath AI: An AI-powered career guidance platform that helps students choose careers, prepare resumes, practice interviews, and discover internships. Revenue is generated through subscriptions and recruiter partnerships.

Analysis: The enhanced prompt provides context and specific instructions, resulting in a more creative and detailed response.

Example 2

Basic Prompt: Write a story about technology.

AI Output: A student created a useful software application.

Enhanced Prompt: Write a motivational story about an MCA student who uses Artificial Intelligence to solve real-world problems and achieve success.

Enhanced AI Output: An MCA student developed an AI application that helped farmers detect crop diseases early. The solution improved productivity and earned recognition at national innovation events.

Analysis: The enhanced prompt provides context and specific instructions, resulting in a more creative and detailed response.

Example 3

Basic Prompt: Write an advertisement for a coffee shop.

AI Output: Visit our coffee shop for delicious coffee.

Enhanced Prompt: Act as a marketing expert and create a professional social media advertisement for a premium coffee shop targeting students and young professionals.

Enhanced AI Output: Experience premium coffee, comfortable seating, and free Wi-Fi at The Coffee Shop. Perfect for studying, meetings, and relaxation. Special student discounts available.

Analysis: The enhanced prompt provides context and specific instructions, resulting in a more creative and detailed response.

Comparison

Basic prompts generally produce short and generic outputs. Enhanced prompts guide the AI by defining roles, objectives, and expected structure, leading to richer and more useful results.

Key Learnings

- Role-based prompting improves creativity.
- Context increases relevance and detail.
- Specific instructions produce structured outputs.
- Creative prompting is useful for business, education, and content creation.

Conclusion

This task demonstrated how creative prompting techniques can significantly improve AI-generated content. Well-designed prompts encourage innovation, detail, and higher-quality responses.
